

AI Power Chain Optimization

Optimizing throughout the power supply chain with Floating LNG Power Vessel

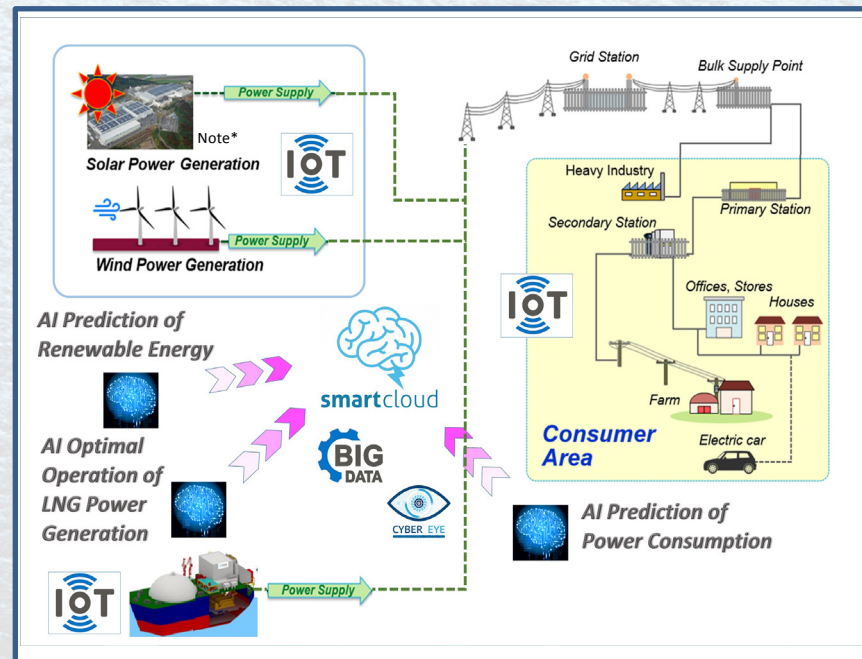

Outline

Chiyoda Corporation has successfully launched a new service that supplements our conventional operations by integrating AI, BD and IoT with pioneering engineering technology developed from our EPC experience.

What can be achieved

The new service **optimizes performance throughout the power supply chain** by:

- Forecasting power demand.
 - Predicting renewable energy supply variations due to weather.
- Chiyoda's Floating LNG Power Vessel** can accommodate energy demand fluctuations.
