

Floating Storage System

- Effective usage of shallow sea space

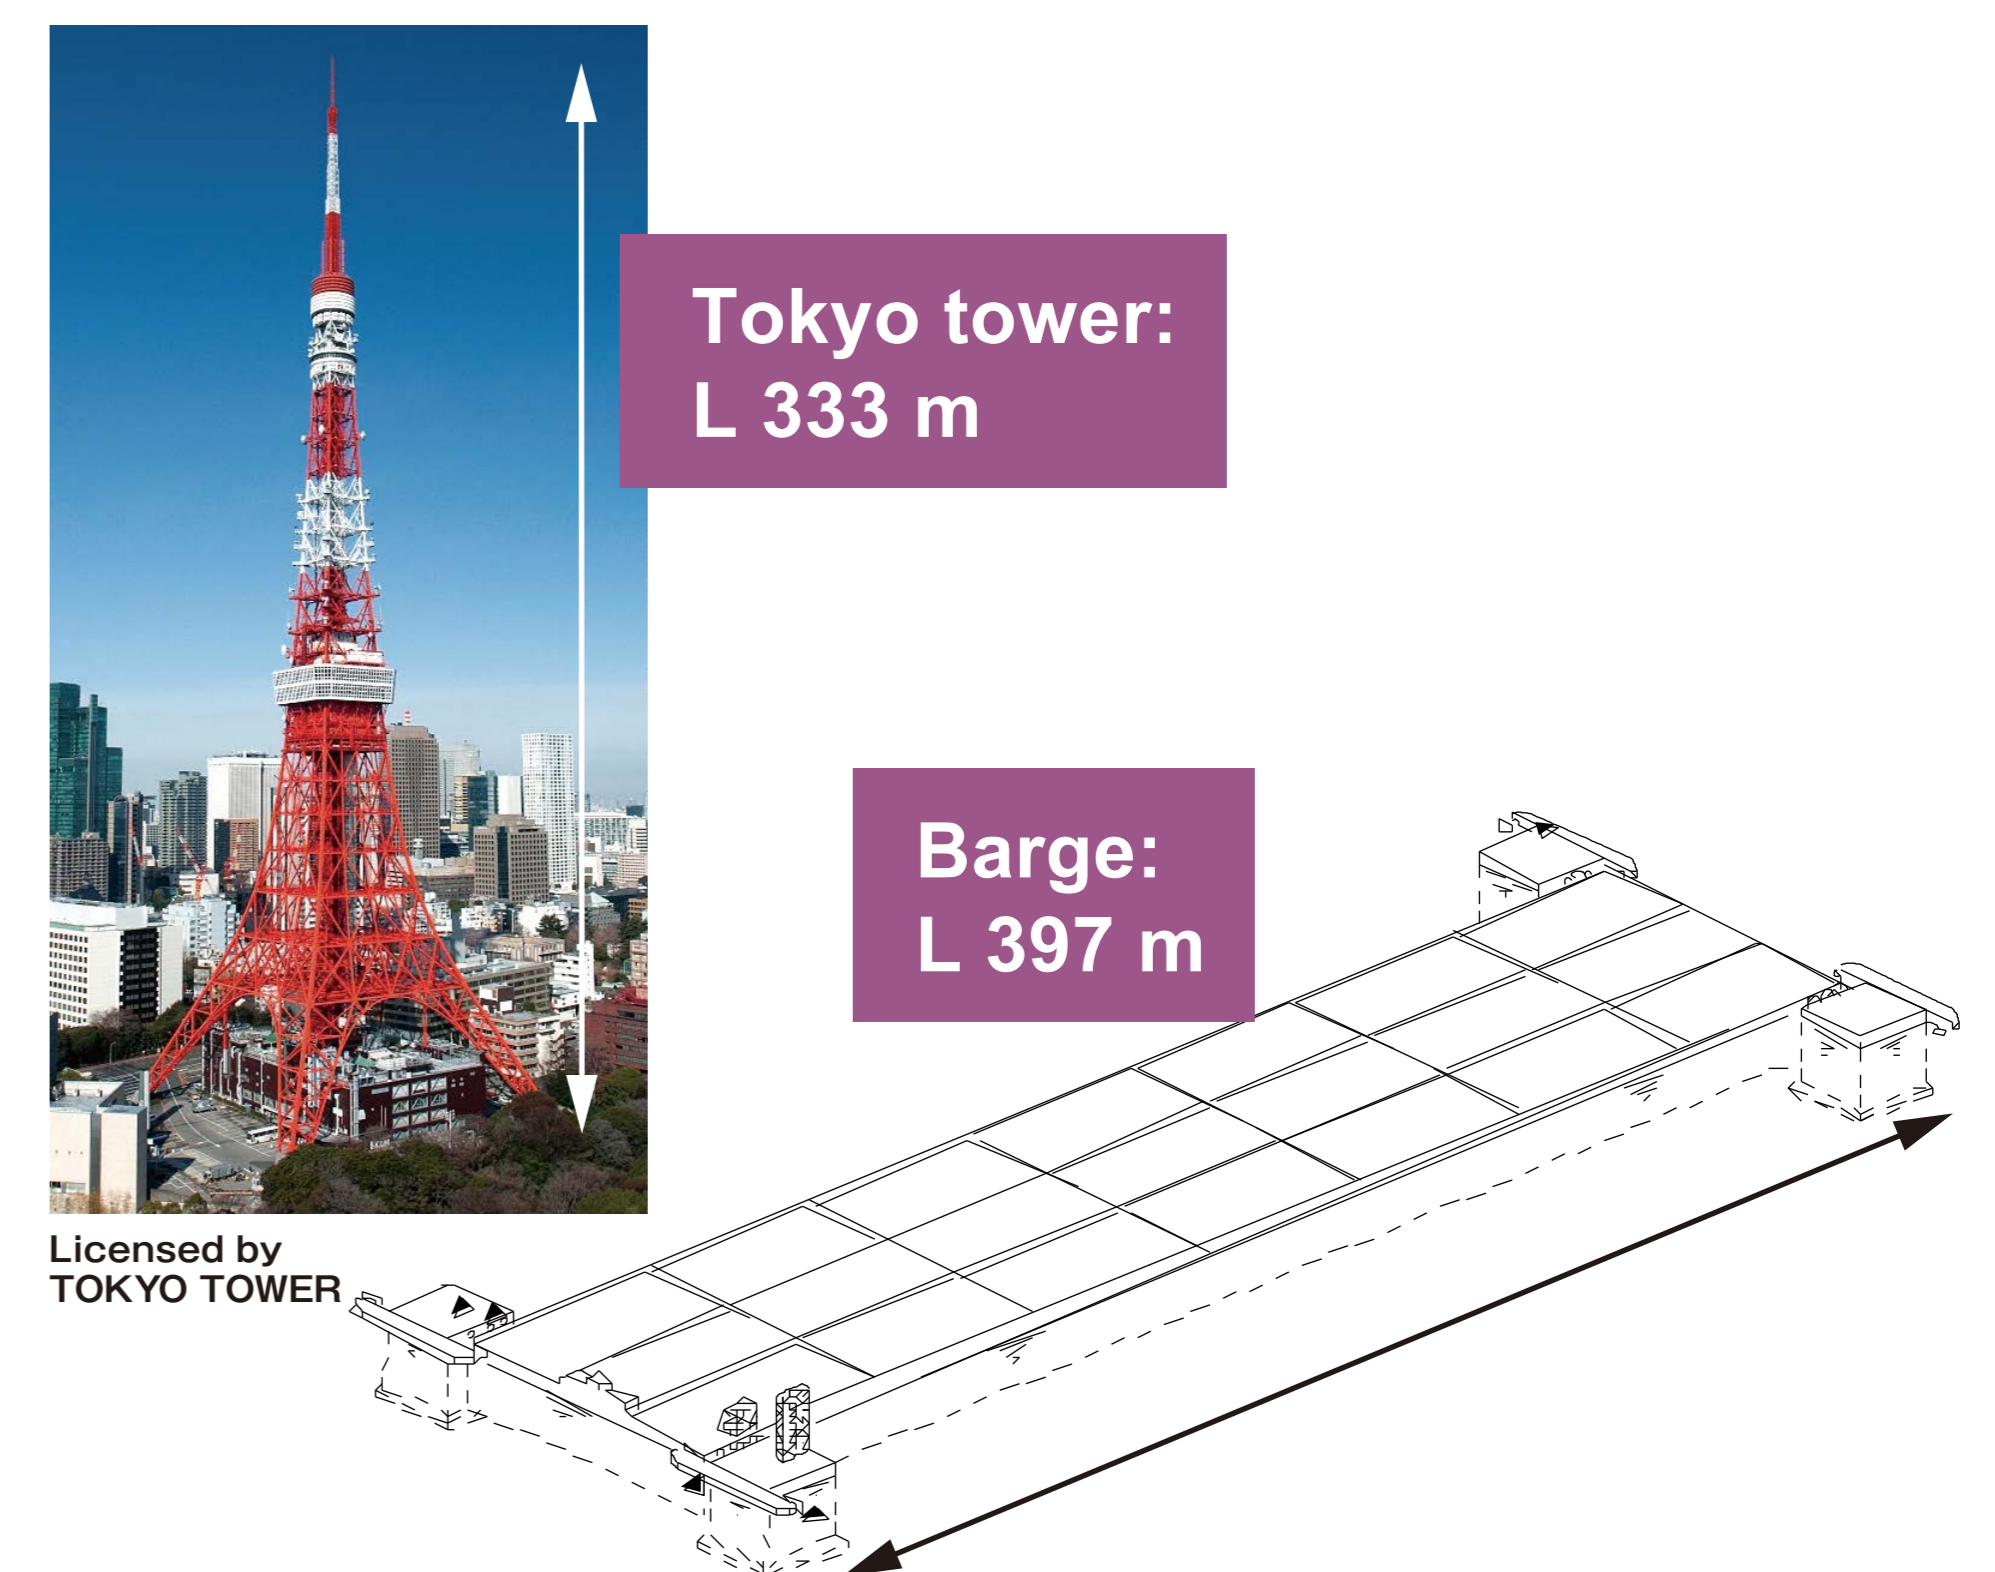

Kamigoto site & Shirashima site

- Effective use of shallow sea space surrounded by islands and breakwaters.
- Double hull structure surrounding the storage tanks in the barge lowers the risk of oil spill.
- Safe and reliable operation has already been implemented for about 30 years for Kamigoto and 20 years for Shirashima.
- Well designed painting and aluminum anode system extend the life of the barges.

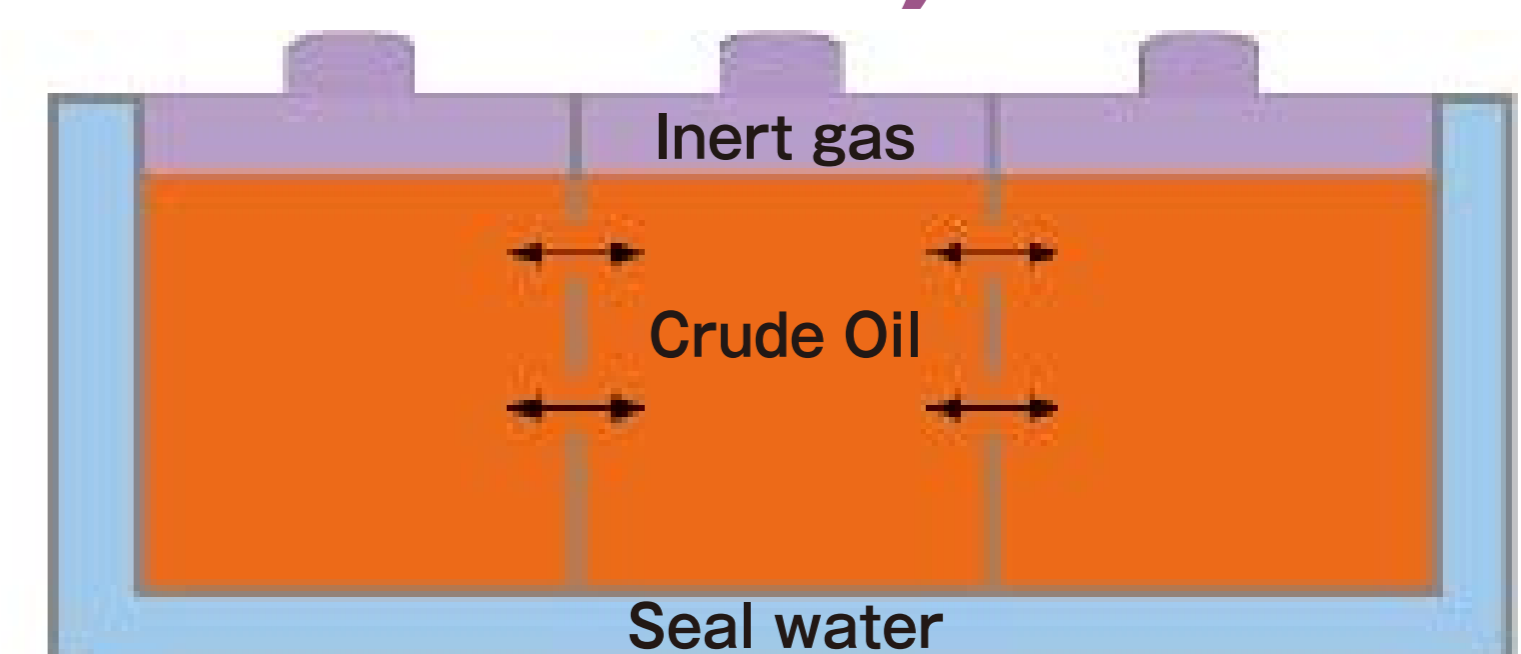

Concept of floating storage system

How big is the barge? (Shirashima)

Double hull structure (Shirashima)
